EDUCATION

University of California, Berkeley

Bachelor of Science, Electrical Engineering and Computer Science

Berkeley, CA

- **GPA: 4.0**
- **Relevant Coursework:** Data Structures and Algorithms, Machine Learning, Machine Structures, Signal Processing, Computer Networks, Discrete Mathematics, Probability Theory, Linear Algebra

WORK EXPERIENCE

Piris Labs

June 2026 – Present

Machine Learning Engineer Intern

Remote

- Building ML infrastructure to optimize LLM inference on B200 GPUs, spanning automated GCP deployment, SGLang serving, and latency/throughput/cost benchmarking, as groundwork for custom photonics hardware.
- Researching scheduling, batching, and speculative decoding to serve GLM 5.2 at **483 tok/s, 23% over** Databricks.

DreamIt

Feb. 2026 – May 2026

Founding Software Engineer

Berkeley, CA

- Directed a **3-person engineering team** shipping end-to-end Rust features for an early-stage no-code gaming app, architecting an async Claude API pipeline that generates playable games from prompts for **1,400+ users**.

TokenWorks

Feb. 2026 – May 2026

Data Science Intern (Part-time)

Remote

- Fine-tuned transformers (BART) to lemmatize, tag, and translate low-resource Sumerian across **200,000+ aligned tokens** from OCR-processed cuneiform, storing results in a containerized **1,400-item** Wikibase knowledge graph.

GetGreen

Sept. 2025 – Dec. 2025

Machine Learning Engineer (Contract)

Remote

- Engineered a RAG chatbot using LangChain and ChromaDB for semantic search **over 1,000+** scraped articles processed with BeautifulSoup, pandas, and SQL, answering sustainability questions in **under 3 seconds**.

California Department of Technology

May 2024 – July 2024

Software Development Intern

Rancho Cordova, CA

- Developed full-stack web apps with HTML/CSS/JS for frontend, Node.js for backend, PostgreSQL for relational data, and JWT authentication to manage scheduling and file sharing for **100+ employees**.
- Managed datasets of **500+ employees** and **70+ clients** using SQL and Excel to drive operational reporting.

PROJECTS

Custom Digit Classifier

C++, CUDA

- Engineered and trained a **Convolutional Neural Network from scratch** in C++/CUDA, hand-writing a training and backpropagation pipeline for convolution, pooling, and dense layers with Adam optimization.
- Wrote GPU-optimized CUDA kernels implementing im2col and GEMM, reaching **over 99% accuracy** on the MNIST dataset and running at **~50% the throughput** of an equivalent PyTorch model for MNIST on T4 GPUs.

GPT-2

Python, PyTorch, CUDA

- Implemented an efficient **124M parameter GPT-2** transformer model based on the decoder architecture from the **“Attention Is All You Need”** research paper with causal self-attention and positional/token encodings.
- Optimized training for **CUDA-enabled GPUs**, resulting in **an 11x speedup** over the unoptimized baseline.

TECHNICAL SKILLS

- **Languages:** Python, C, Java, SQL, Rust, JavaScript, TypeScript, HTML/CSS, Scheme, Bash, RISC-V Assembly
- **Libraries:** PyTorch, SGLang, HF Transformers, NumPy, pandas, Matplotlib, BeautifulSoup, Flask, LangChain
- **Tools:** Git, Docker, Kubernetes, AWS, Ollama, GCP, Linux, CUDA, PostgreSQL, ChromaDB, Supabase
